FIVE KEY TAKEAWAYS
FROM THIS REPORT

1) The key to building loyalty is reliability.
   90% of consumers say they associate the word “reliable” with brands they are loyal to. It is the single most important factor in determining loyalty overall, and across a range of industries.

2) When asked to name a brand they’re loyal to, one in three Americans will say either Walmart or Amazon.
   We asked 6,600 consumers to think of a brand they are loyal to and name the first one that came to mind: 1,262 said Walmart and 854 said Amazon.

3) Learn from the best: The smartphone industry has loyalty locked down.
   Among consumers who are likely to purchase a new smartphone in the next two years, the majority (61%) are very likely to buy from the same manufacturer as they currently own. Compare that to just 31% for people planning to buy a new car. Apple and Samsung were both among the list of brands with the most amount of mentions for brand loyalty.

4) Can online disruptors take away loyal consumers?
   Survey points to yes.
   We took a look at the shaving razor market as a test case. Among the key findings: 31% of people who have used an online razor subscription service say they were loyal to a razor brand before switching to one of these services.

5) Company ethics aren’t a major factor in terms of building brand loyalty.
   Across a range of four different consumer categories, the ethics of a company rank towards the lower end of importance when determining loyalty. For example, just 23% of consumers who are loyal to a smartphone say the company’s good values are a factor. Compare that to 71% who say the phone’s features matter.

INDUSTRY SPOTLIGHT: PERSONAL CARE CPGS

Including a look at how online disruptors can impact loyalty
Brand loyalty often translates to purchases (but not always):
For the average product listed above, 37% of consumers are loyal to one brand and 27% will look to buy from one brand without considering alternatives. That means for every four consumers who are loyal to a brand, roughly three won’t even consider buying something else.

Industry Spotlight: Personal Care CPGs

Brand Loyalty by Products

For each product, there are two separate measurements - both intended to gauge loyalty. First, the percentage of consumers who say they are loyal to a brand. Second, the percentage of adults who say they have a preference they will seek out, regardless of other options available.

Two takeaways from this chart:

1. Even when comparing similar products, brand loyalty varies dramatically: The purchasing considerations that go into buying shaving cream and deodorant are quite similar, yet the degree of brand loyalty is remarkably different between these two products - 24% and 61% respectively.

2. Brand loyalty often translates to purchases (but not always): For the average product listed above, 37% of consumers are loyal to one brand and 27% will look to buy from one brand without considering alternatives. That means for every four consumers who are loyal to brand, roughly three won’t even consider buying something else.

Can subscription upstarts peel away loyal customers?

A look at how online razor subscription companies have impacted loyalty in the market.

Were subscribers loyal before switching? Among consumers who have switched over to a subscription service for shaving razors, 31% say they had been loyal to another brand before switching.

Could that base grow? Among consumers who haven’t used one of these services, 26% are interested in using one. And among the other 74% who aren’t currently interested - 29% say they would be more interested if they knew it would save them money.

Are non-subscribers more loyal? When looking at consumers who haven’t ever used a subscription service, 31% are currently loyal to a razor brand (slightly lower than the average among all consumers).

Where consumers most want subscription services: 37% of consumers are interested in a subscription service for shampoo and 36% are interested in one for deodorant.
